Support & Resistance

How to draw, Validation Break, Characteristic S&R

Analogi Sederhana :

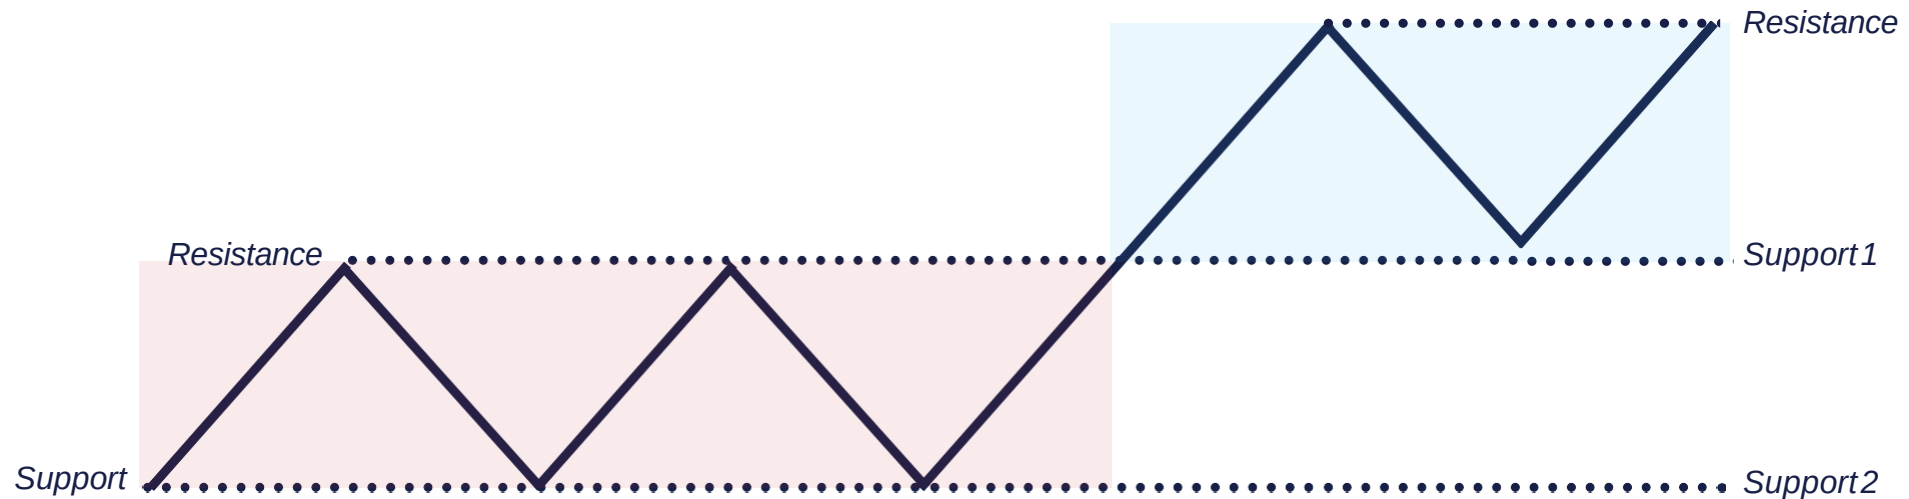

Agar lebih mudah dipahami, support dan resistance dapat diilustrasikan sebagai “lantai dan plafon”. Bola akan mentak ke atas bila membentur lantai (support), sebaliknya akan memantul ke bawah bila membentur plafon (resistance).

Garis support dapat dibentuk dengan cara **menarik garis horizontal** dari titik terendah pada **lembah** yang sudah terjadi. Sementara, **garis resistance** dapat dibentuk dengan **menarik garis horizontal** dari titik tertinggi **puncak** yang sudah terjadi.

Support become Resistance Resistance become Support

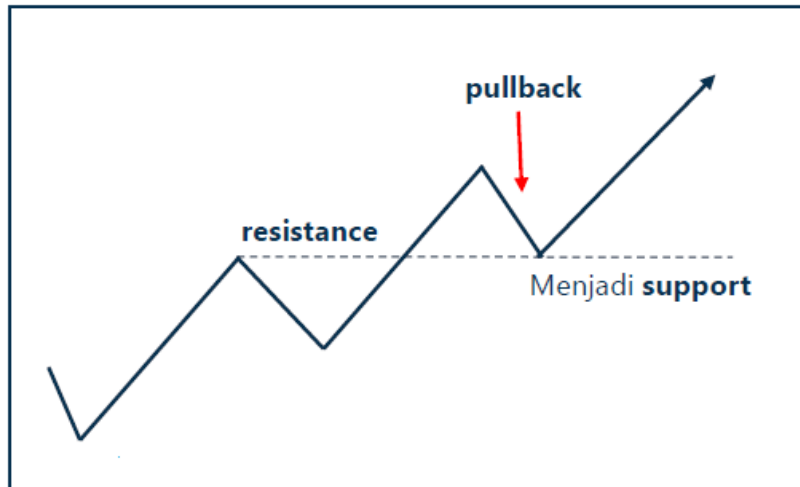

Apabila suatu garis support berhasil ditembus, maka garis tersebut akan berubah menjadi garis resistance, dan begitu pula sebaliknya

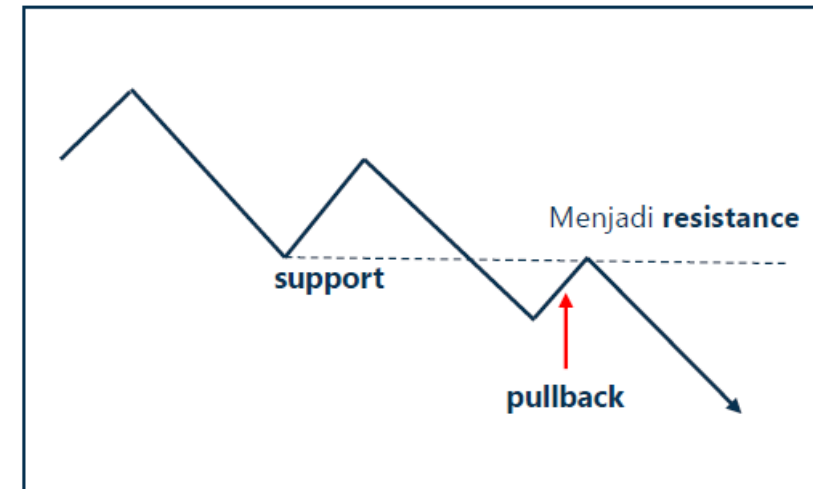

Kapan sebuah garis support atau resistance dapat dinyatakan **telah tertembus (valid break)** ?

Dinyatakan **telah tertembus** jika **harga closing telah berada diluar garis**

Pullback : Suatu kondisi harga kembali menguji level S/R yang tertembus

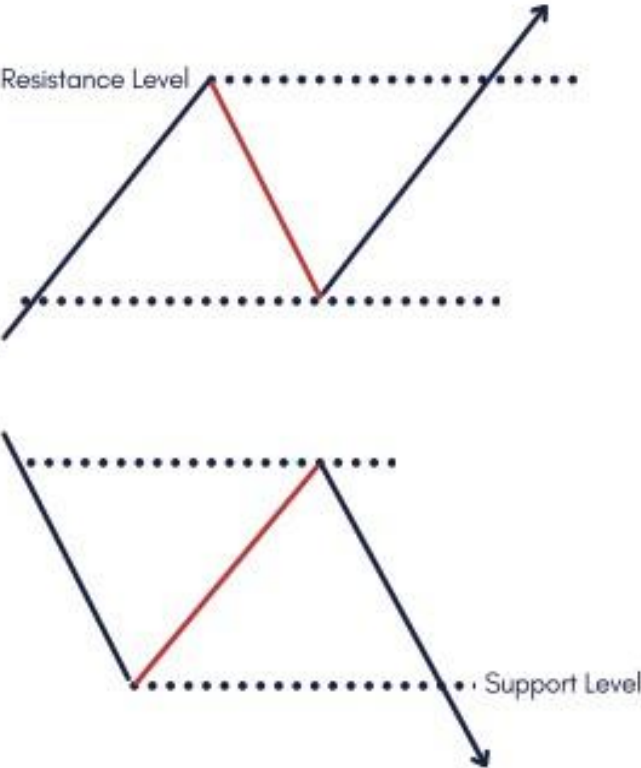

resistance berubah menjadi **support**

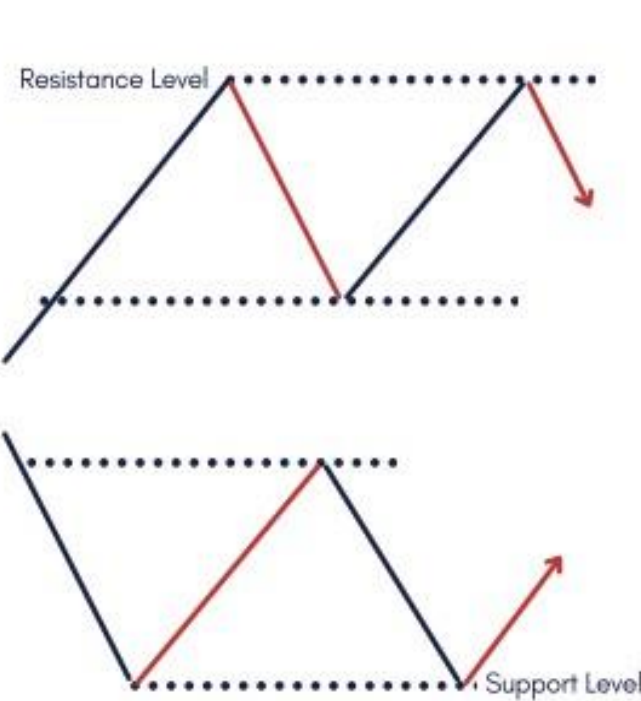

support berubah menjadi **resistance**
